

Practical 0

Aim: Create data set for the following:

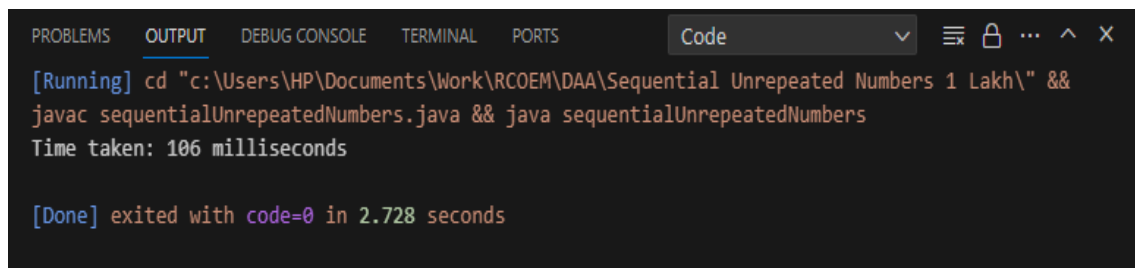

1. Sequential unrepeated one lakh integers to be generated and stored in file1. Display its time in milliseconds.
2. Random unrepeated one lakh integers to be generated and stored in file2. Display its time in milliseconds.
3. Random repeated one lakh integers to be generated and stored in file3. Display its time in milliseconds.

For file 1:

```
Code: import java.io.BufferedWriter;
import java.io.FileWriter;
import java.io.IOException;

public class sequentialUnrepeatedNumbers {
    public static void main(String[] args) {
        long startTime = System.currentTimeMillis();
        try (BufferedWriter bw = new BufferedWriter(new
FileWriter("sequentialUnrepeatedNumbers.txt"))) {
            for (int i = 1; i <= 100000; i++) {
                bw.write(Integer.toString(i));
                bw.newLine();
            }
        } catch (IOException e) {
            e.printStackTrace();
        }
        long endTime = System.currentTimeMillis();
        System.out.println("Time taken: " + (endTime - startTime) + " milliseconds");
    }
}
```

Output:

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  PORTS  Code
[Running] cd "c:\Users\HP\Documents\Work\RCOEM\DAA\Sequential Unrepeated Numbers 1 Lakh\" &&
javac sequentialUnrepeatedNumbers.java && java sequentialUnrepeatedNumbers
Time taken: 106 milliseconds

[Done] exited with code=0 in 2.728 seconds
```

For File 2:

```
Code: import java.io.BufferedWriter;
import java.io.FileWriter;
import java.io.IOException;
import java.util.ArrayList;
import java.util.Collections;

public class randomUnrepeatedNumbers {
    public static void main(String[] args) {
        long startTime = System.currentTimeMillis();
        ArrayList<Integer> numbers = new ArrayList<>();
        for (int i = 1; i <= 100000; i++) {
            numbers.add(i);
        }
        Collections.shuffle(numbers);
        try (BufferedWriter bw = new BufferedWriter(new
FileWriter("randomUnrepeatedNumbers.txt"))) {
            for (int number : numbers) {
                bw.write(Integer.toString(number));
                bw.newLine();
            }
        } catch (IOException e) {
            e.printStackTrace();
        }
        long endTime = System.currentTimeMillis();
        System.out.println("Time taken: " + (endTime - startTime) + "
milliseconds");
    }
}
```

Output:

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  PORTS  Code
[Running] cd "c:\Users\HP\Documents\Work\RCOEM\DAA\Random Unrepeated Numbers 1 Lakh\" && javac
randomUnrepeatedNumbers.java && java randomUnrepeatedNumbers
Time taken: 324 milliseconds

[Done] exited with code=0 in 2.731 seconds
```

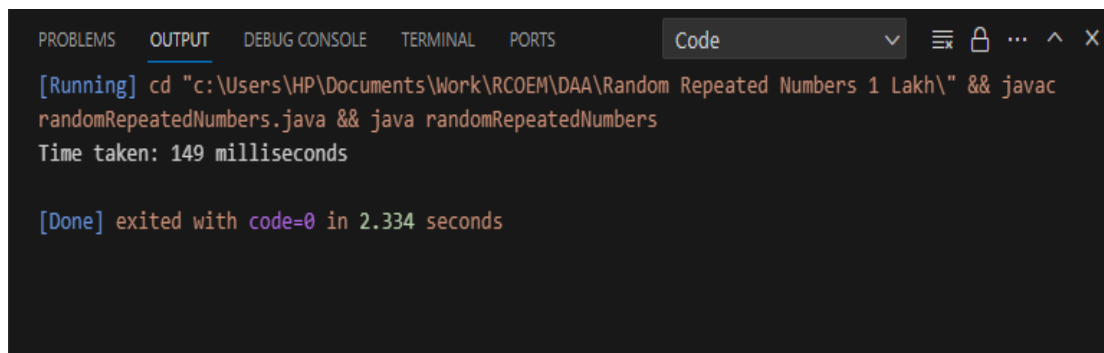

For File 3:

Code:

```
import java.io.BufferedWriter;
import java.io.FileWriter;
import java.io.IOException;
import java.util.Random;

public class randomRepeatedNumbers {
    public static void main(String[] args) {
        Random random = new Random();
        long startTime = System.currentTimeMillis();
        try (BufferedWriter bw = new BufferedWriter(new
FileWriter("randomRepeatedNumbers.txt"))) {
            for (int i = 1; i <= 100000; i++) {
                bw.write(Integer.toString(random.nextInt(0, 100000)));
                bw.newLine();
            }
        } catch (IOException e) {
            e.printStackTrace();
        }
        long endTime = System.currentTimeMillis();
        System.out.println("Time taken: " + (endTime - startTime) + "
milliseconds");
    }
}
```

Output:

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  PORTS  Code
[Running] cd "c:\Users\HP\Documents\Work\RCOEM\DAA\Random Repeated Numbers 1 Lakh\" && javac
randomRepeatedNumbers.java && java randomRepeatedNumbers
Time taken: 149 milliseconds

[Done] exited with code=0 in 2.334 seconds
```
